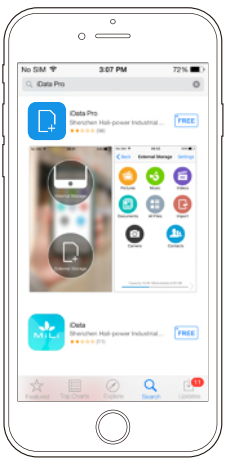
Download iData Pro App

To ensure your iData Pro is set up properly, you are required to download the iData Pro App on to your iDevice prior to accessing, managing or organizing any files stored in your iData Pro.
Please scan the QR code below, or search for iData Pro in the App Store to download it directly.



iData Pro

Available on the App Store

Back to Content Page

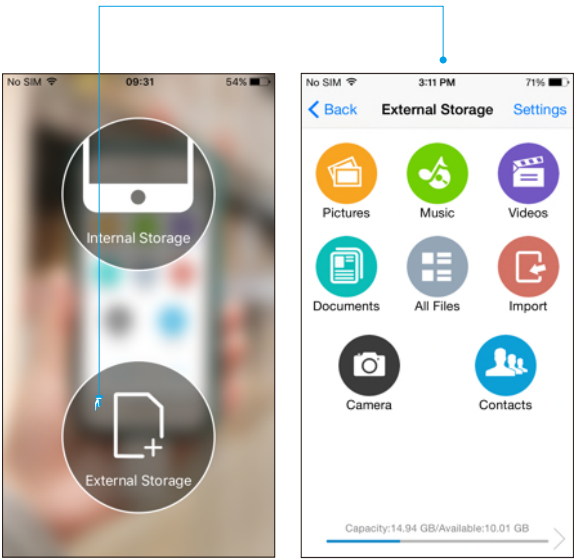
Internal and External Storage

Connect the iData Pro to your iDevice, tap to enter the iData Pro App, and you will see two categories: Internal Storage and External Storage.

Internal Storage:

The iData Pro's Internal Storage is an independent storage space partitioned from the iDevice's storage, but note it does occupy some actual storage space on the iDevice. Simply put, Internal Storage is an empty folder created on the iDevice, so it does not contain any files. However, since it shares the iDevice storage, you can still access it when your iDevice is not connected to the iData Pro.
Internal Storage is organized into five separate categories: Pictures, Music, Movies, Documents, and All Files.

Back to Content Page



External Storage:

External Storage refers to the storage space on the iData Pro itself, which can be accessed only when your iDevice is connected to iData Pro.
You can import Pictures and Videos from your iDevice into iData Pro; as well as store Movies, Documents, Images and other Files from your computer to iData Pro.

Import Pictures and Videos

Tap the “Import” button and it will open the photo gallery on your iDevice. Select the Photo(s) or Video(s) you wish transfer and click “Import”. Next, choose the location where you would like your files to be saved and then click “Import Here” in the top right corner to start.

Add Password Protection

Click “Settings” and select “Safety” to add password protection for iData Pro.
Steps:

1.Getting your Verification Code

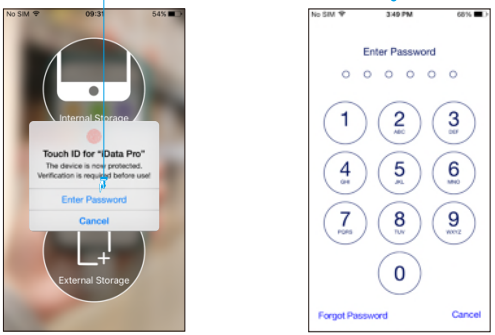
First, you need to bind the email address you would like to be associated with the iData Pro. You will receive a six-digit Verification Code in that email inbox. Enter the Verification Code and click “Verify”. Once your email address is successfully verified, you will proceed to the Password Registration page.

2.Set your Password

Choose a six-digit password and re-enter it to confirm. Once your password has been successfully created, “Secure Email Bound” and “Password Enabled” will be shown on the “Safety” page.

Note: By default, “Lock on PC/Android End” is “Enabled”. In this case, you are unable to access any files stored on iData Pro when connecting it to a PC or Android phone. Please disable the lock for access.

If you have Password Protection enabled, you will be required to enter your password in order to access iData Pro. If you are using an iDevice that supports Touch ID, you may use that to unlock your iData Pro.



Click “Secure Email” to change the email address associated with the App.
Click “Password” to change, recover, or turn off the Password.
Note: If you remove the Password and later decide to turn-on this feature, you will have to “Bind with Email” and “Set up Password” again the next time you turn on Password Protection.

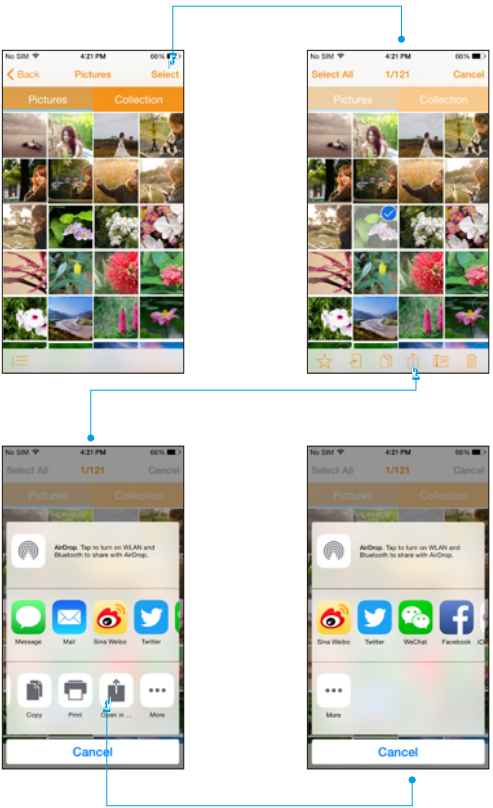
Share Files

Open or select the file/image you want to share and click the “Share” button. Locate the “Open in” button on the pop-up window and click on it. A list of third-party apps installed on your iDevice will appear on the window. Select the App that you would like to use to share your Files. Follow the images below for detailed instruction on how to share an image.



Back to Content Page

Store Files from Third-party Apps

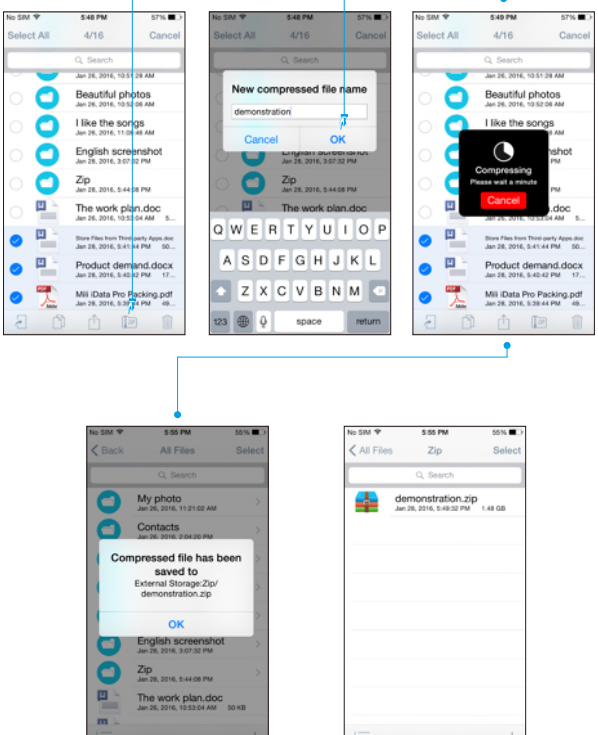
Storing files from third-party Apps is easy to do. For example, to save an email attachment:
Download and open the attachment, click the “Share” button and select “Open in other Apps” on the pop-up window. Next, a list of Apps that support this function on your iDevice will appear on the window. After clicking “Open with the third party App”, a reminder message will appear stating, “Attachment from a third-party App has been saved to: Internal Storage/All Files”. Now, you can view and edit the File.

Compress and Extract Files

To Compress a File:

Select the File to be compressed then click the “Compress” icon. A dialog box will pop up asking for a File name for the new compressed file. Click “OK” to start the process.

The amount of time it takes is proportional to the size of the compressed file. Once completed, a “Reminder” box will pop up showing “The compressed file has been saved to the Zip folder”. You can view the compressed file in the “Zip” folder under “All Files”.



Back to Content Page

To extract a File:

Click on the file to be extracted, and click “OK” to confirm on the pop-up window. It will start to extract the file. The amount of time it takes is proportional to the size of the compressed file. Once completed, all files in the compressed file will be shown in the folder where the compressed file is located.

Note: Only Zip format is supported at this time. RAR format is not supported.

Use on Android Phones

There are two ways to use the iData Pro on Android phones:
1.Download iData Pro App for Android
2.Use it only under OTG mode
Note: OTG function varies across different brands of Android phones. For example, the image below shows the OTG model of a Huawei phone. For additional details, please refer to the user manual of your phone regarding the use of OTG mode.

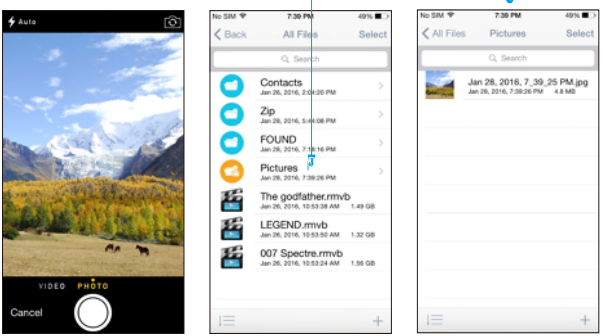
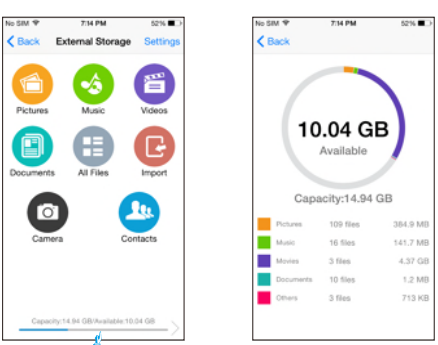
Use the Camera Function

Select the “Camera” button to take photos and record videos. These photos and videos will be stored directly on to your iData Pro under the “All Files/ Camera” folder in External Storage. Any photos and videos taken with the iData Pro will not take up storage space on your iDevice.



Check the External Storage Status

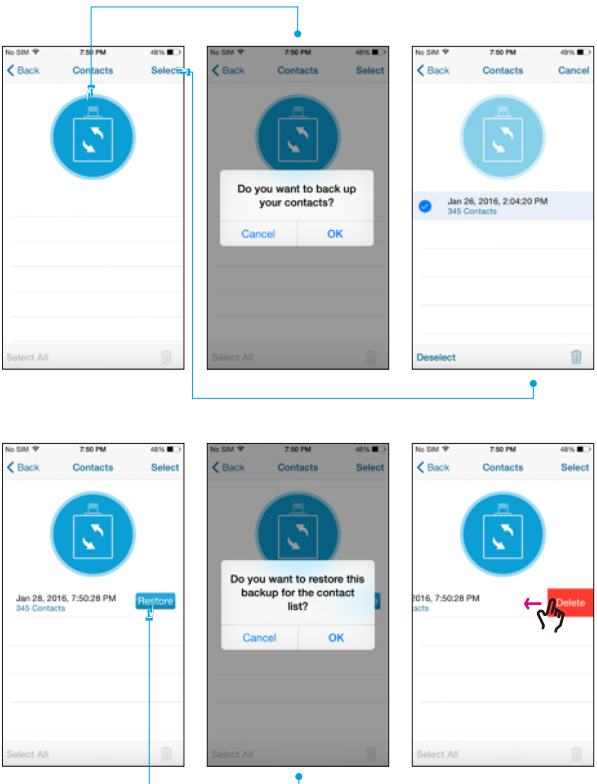
Select the “Storage Status Bar” on the bottom of the External Storage page and you can view details on the storage space available on your iData Pro. In addition, you can find details on how the External Storage is used. You can view the amount of storage used by photos, videos, documents, and music files.



Back to Content Page

Use the Contacts Function

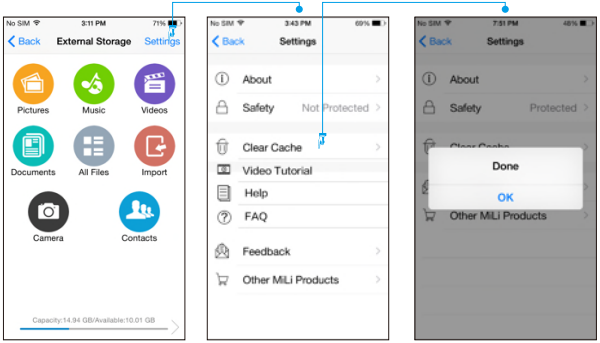
Select the “Contacts” button to view your contacts. Select “Back up to iData Pro” and a dialog box will appear asking, “ Do you want to back up your contacts ? ”, then press “OK”. If you lose your contacts insert the iData Pro and select “Restore” and a dialog box will appear asking, “Do you want to restore this back up to the contact list ? ” Select “OK” to start the restore process. You can delete a backup file by clicking “Select” or by sliding the file to the left.



Back to Content Page

Clear Cache

The iData Pro will create cache files. In order to keep the iData Pro running smoothly we recommend clearing the cache regularly. On the Settings page, select “Clear Cache” and it will clear.
Note: After clearing the cache, photo thumbnails will be reloaded.



Upgrade Firmware

In order for the iData Pro to run smoothly, the firmware may be updated to accommodate any iOS updates. To view the current firmware, select “Settings” and view the “About” page, you will see the firmware version. To upgrade, follow the same steps to the view the firmware version, if there is an upgrade available it will be marked with a red message. Click on the red message to upgrade to the new version.
Note: The iData Pro must be connected to the iDevice during the upgrade process. Any interruptions will require you to restart the process.
